The Computational Methods in Systems Biology  
(CMSB) workshop series was established in 2003 by  
Corrado Priami. The purpose of the workshop series is  
to help catalyze the convergence between computer  
scientists interested in language design, concurrency  
theory, software engineering or program verification,  
and physicists, mathematicians and biologists  
interested in the systems-level understanding of  
cellular processes.

This book constitutes the refereed proceedings of the 17th International Conference on Computational Methods in Systems Biology, CMSB 2019, held in Trieste, Italy, in September 2019. The 14 full papers, 7 tool papers and 11 posters were carefully reviewed and selected from 53 submissions. Topics of interest include formalisms for modeling biological processes; models and their biological applications; frameworks for model verification, validation, analysis, and simulation of biological systems;

Mathematical and Computational Methods in Biology

Mathematical and computational methods are critical to conduct research in many areas of biology, such as genomics, molecular biology, cell biology, developmental biology, neuroscience, ecology and evolution. Conversely, biology is providing new challenges that drive the development of novel mathematical and computational methods.
