As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

How Chinese hospitals have been growing and adopting international standards such as JCI and HIMSS EMRAM to fuel their advancements is not well-known to the western world. In this book, Jilan Liu, as former Principal Consultant of JCI and current Chief Executive Officer for HIMSS Greater China, presents a selection of case examples written by Chinese hospital executives and staff showcasing first-hand experiences and insights into how the leading healthcare organizations grow and continue their success in China. The case examples include Chinese hospitals who have participated in JCI accreditation and/or HIMSS EMRAM. These hospitals represent the new wave of organizations adopting international standards while accommodating the unique conditions of China.

Desde la última mitad de siglo XX, el descubrimiento de nuevos fármacos ha sido exponencial. Actualmente, el arsenal terapéutico disponible a nivel hospitalario y en ámbitos comunitarios es inmenso, y por esta razón, es clave tener un conocimiento exhaustivo de los medicamentos que maneja cada profesional sanitario en su práctica diaria. De esta forma, el riesgo asociado al uso y administración inadecuado de medicamentos puede mitigarse y la calidad de vida del paciente mejorarse. Es cierto que la administración e implementación de los nuevos fármacos debe estar sometida a un riguroso control para evitar daños potenciales a los pacientes. Por eso, la intención de esta obra es, de una parte, fomentar el conocimiento de los distintos grupos terapéuticos de fármacos, y de otra, estudiar sus efectos adversos, incompatibilidades e interacciones farmacológicas. En este aspecto, el personal de enfermería juega un papel clave en la provisión de una atención sanitaria de calidad, al ser el último eslabón de la cadena previo al paciente y debe, por tanto, conocer el uso y la segura administración de los fármacos para minimizar los riesgos y complicaciones que su uso puede conllevar. En esta obra, también se presta atención a las repercusiones en el ámbito legal que pueden resultar de algunas actuaciones sanitarias que frecuentemente son debatidas jurídicamente, tales como la prescripción de medicamentos por parte del personal de enfermería o los errores en la administración de fármacos.

The management consulting team headed by Mr. Jian Di has provided strategic management consulting services for over 700 medical institutions and has rendered guidance for more than 100 medical institutions in constructing patient-centric hospital cultures. *Studies on Hospital Management Transformation* reflects Mr. Jian Di's more than 40 years of management experience, including nearly 20 years of experience in hospital management. Condensing Mr. Jian's thoughts on patient-centric care in hospital culture, this book introduces a method to systematically evaluate and construct hospital culture using 32 procedures and 500 indicators. Theoretically innovative and easy to operate, the proposed system easily produces the desired effect in constructing patient-centric hospital cultures while defying conventional cultural concepts. Due to the absence of a clear evaluation standard and system, the majority of hospital management personnel in China are uncertain of how to evaluate and construct hospital culture. This book presents a theoretical model, evaluation indicators and improvement objectives of hospital culture. Beyond theories, it also includes substantial systematic approaches and practical construction cases which make this book highly applicable. The theoretical system of the patient-centric hospital culture has been applied in over 100 medical institutions. This book should be taken as an essential guidebook for hospital management.

This open access book provides a concise yet comprehensive overview on how to build a quality management program for hematopoietic stem cell transplantation (HSCT) and cellular therapy. The text reviews all the essential steps and elements necessary for establishing a quality management program and achieving accreditation in HSCT and cellular therapy.
