

## Su 8 50 100 Microchem

If you ally dependence such a referred su 8 50 100 microchem book that will give you worth, acquire the unquestionably best seller from us currently from several preferred authors. If you desire to hilarious books, lots of novels, tale, jokes, and more fictions collections are then launched, from best seller to one of the most current released.

You may not be perplexed to enjoy all book collections su 8 50 100 microchem that we will no question offer. It is not all but the costs. It's practically what you craving currently. This su 8 50 100 microchem, as one of the most in action sellers here will completely be in the course of the best options to review.

## Su 8 50 100 Microchem

SU-8 is a high contrast, epoxy-based photoresist designed for micromachining and other microelectronic applications where a thick chemically and thermally stable image is desired. The exposed and subsequently cross-linked portions of the film are rendered insoluble to liquid developers.

SU 8 Information Provides information on how to use SU 8 to create desired thicknesses. SU-8 Spin Speed Calculator Selects a SU-8 type and calculates RPM for a given thickness. Suppliers: The solution based SU-8 can be obtained from Microchem or Gersteltec ; the SU-8 dry sheets are obtained from DJ Microlaminates , formerly known as DJ Devcorp

---

## SU-8 photoresist - Wikipedia

From the SU-8 datasheets (Microchem): SU-8 has good mechanical properties, therefore hard bakes are normally not required. For applications where the imaged resist is to be left as part of the final device, the resist may be ramp/step hard baked between 150-200 ° C on a hot plate or in a convection oven to further cross link the material.

Bake times

SU-8 3000 has been formulated for improved adhesion and  
reduced coating stress. It is being used where high bond  
strength and improved flexibility for microstructure  
fabrication is desired. As a result, adhesion to the substrate  
is greatly improved.

When SU-8 is exposed to UV light its molecular chains cross-link, causing the SU-8 to solidify. SU-8 is highly transparent in the ultraviolet range. This allows for the fabrication of relatively thick (hundreds of micrometers) structures with nearly vertical side walls. Two companies have licenses from IBM to sell SU-8: MicroChem and Gersteltec.

SU-8 2000 resists are available in twelve standard viscosities. This processing guideline document addresses six products: SU-8 2000.5, SU-8 2002, SU-8 2005, SU-8 2007, SU-8 2010 and SU-8 2015. Figures 1.a. and 1.b. provide the information required to select the appropriate SU-8 2000 resist and spin conditions to achieve the desired film thickness.
